

PURCHASING POLICY

We want partners with whom we can build long-term relationships, mutual respect and bilateral communication. We believe our suppliers must be collaborators in our commitment to implementing sustainable and innovative measures.

We believe in ethical purchasing which is environmentally and socially responsible. We choose our suppliers by taking into account their commitments in matters of sustainability, in addition to their respect for working conditions, minimum wages, workers' rights and strict compliance with current legislation.

We do so in such a way that purchasing decisions do not only take value for money into account, as they also consider **local development**, fair prices, defence of human rights and the improvement of working conditions.

We look for **responsible purchasing**: to only buy the kind of products or services necessary to avoid overstocking.

We buy from local suppliers as much as possible, and in accordance with our local community policy, we seek to **boost and improve the economic and social conditions of our region**.

We also try to **minimise waste**, buying products in bulk.

Our management is in line with our **corporate values**, acting with **maximum transparency** with all stakeholders.
